

The purpose of this database that I am creating is to determine, how course difficulty and the number of courses taken per semester affects the GPA of the student. Every Student should be able to enter information about themselves using student number, first name, last name, GPA, and the number of courses being taken. Every student is able to see the difficulty of the course they are taking, who the professor is, and the course code for each course the student is taking. Additionally should also be able to see important information about the university they are attending such as the city the school is in, the programs that the university offers, the name of the university, and its phone number.
